PREFACE.

To the Chairman and Henry of the Public Health and Housing Committee of the Essex County Council.

I have the honour to submit to you my Third Annual Peport for the Administrative County for the year 1921. This is the 32nd Report which has been issued.

By circular 269, dated 28th December, 1921, the Ministry of Health state that Annual Reports of a full and detailed character (to be called survey reports) will normally be required at intervals of not 1 35 than five years, and that Annual Reports for 1919 or 1920 will be treated as constituting the first of the series of Survey Reports. In other years Annual Reports of a more simple character (to be called ordinary reports) will suffice. It is no longer necessary for me to make a digest of all annual and special reports from local Medical Officers of Health, as the Ministry will be satisfied if my annual report is devoted, in the main, to a consideration of the work for which the County Council is primarily responsible.

With these instructions in view the report for 1921 has been divided into four parts as follows:-

Part I. Vital Statistics and General Matters.

Part II. Combined Medical Servico.

Part III. Tuberculosis.

Part IV. Maternity and Child Welfare.

I desire to again record my high appreciation of the co-operation and counsel of yourself and the members of the Committee during my third year of office. To my predecessor, Dr. J. C. Thresh, who has continued to render most valuable assistance, I wish to record my hearty thanks. I am also indebted to the Medical Officers of Health and other officials of Local Sanitary Authorities for their continued co-operation, and also to the Medical, Dental, Nursing, and Clerical Staffs for their loyalty throughout the year.

I am especially indebted to my Chief Assistant (Dr. T. P. Puddicombe), and to my Chief Clerk and Sanitary Inspector (Mr. A. Marsh) for their loyalty and holp.

W. A. BULLOUGE,
County Medical Officer.

Public Health Department, 26, High Street,

Cholmsford.

31st May, 1922.

PART I.

NATURAL AND STRAIN CONTINUOUS . WHE

Population.

The decennial Census was hold on 19th June, 1921 (postponed by reason of industrial unrest from 24th April, 1921). As might have been expected, the results show wide differences from the estimated figures of the various districts, this being largely due to the migration of population desing the war period. The Census Act, 1920, unlike its predecessors, is a perpetual fet and contains provisions under which a census can be taken at quinque unial intervals, and local censuses can be to' in at any time by the request and at the expense of the Local Authority. The Registrar-General sent out provisional figures on 1844 fugust, 1921, in which the acreage and population of the Administrative Comparative purposes the figures for 1914 are also given:—

	Acreage.		For thion.
1911	 931,826	111	85., 3 (excluding East 1 and Southend)
1921	 934,443	* * 0	918,111

Of the 47 Saritary Districts 16 showed a decrease in populatic, the realest being in Saffron \ alden Rural (719), Halstead Rural (593), O r Rural (591), Harwich Borough (586), Belchamp ral (457), Saffron Wr¹ Borough (435), Halstead Urban (348).

Increase in population were most noticeable at Class and Urban (7,272), Illord Urban (7,003), Resulted Rural (4,729), Orsett Rural (4,101), Barking Urban (4,226), Populo 3 Rural (4,141).

In view of the proliminary nature of the above-mentioned Census Report, the Registrar-General has for statistical purposes again furnished estimated population figures, as follows:—

(1) For calculating birth-rates, the figure, which meludes civilian and military population, is 912,605
(2) For calculating death-rates, the figure, which includes only civilian population, is 910,797

A common population figure (estimated) was, however, furnished by the Registrar-General for every Sanitary District with the exception of Colchester and Harwich Boroughs, both of which contain an appreciable non-civilian population.

The usual summary, showing average number of persons per acre and seves per person, is set out overless:

			Population	•		
	Area in Acres,	Prelim- inary	Estimate tion,	d popula- 1921.	Persona per acre.	Acres per person.
	1921. Cui	Census 1921.	For Birth- rate.	For Death- rate.	Census	figures).
Municipal Boroughs (5)	 26,516	89,639	89,120	87,312	3.3	0.29
Urban Districts (25)	 75,566	554,733	552,200	552,200	7:3	0.13
Rural ,, (17)	 862,361	273,739	271,285	271,285	0.3	3.1
	964,443	918,111	912,605	910,797	0.95	1.05

PHYSICAL FEATURES AND GENERAL CHARACTER OF THE DISTRICT.

Essex is one of the Metropolitan Shires, and is the someth of the Administrative Counties in respect of the number of inhabitants as shown by the Preliminary Census 1921. About one-half of the whole population of the County is centred in the southwestern corner lying immediately adjacent to the Metropolis. The County in form is roughly a parallelogram measuring 48 miles from north to south and 63 from north-east to south-west.

In the County there are to be found populous urban areas, residential suburbs, wide agricultural districts, small manufacturing centres, residential seaside resorts, and a seafaring, fishing and dockside population.

Birth-rate.

For the Administrative County the fall in the birth-rate from 23.6 in 1920 to 20.0 in 1921 is by no means as significant as is the case in certain of the Sanitary Districts, a few examples of which are enumerated below:—

Sanitary District.		1920.		1921.
Tilbury Urban	• • •	37.9	***	22.6
Harwich Borough		31.1		24.4
Shoeburyne 3 Urban		30.6		23.8
Tendring Rural		27.4	• • •	20.1
Bumpstead Rural		26.6		17.1
Chelmsford Rural		26.2	4	18.9

Last year there were four sanitary districts with rates exceeding 30.0, whereas in 1921 there was only one district (Barking Urban 26.7) with a rate over 25.0.

The birth-rate for 1920 was considerably above the average, largely due no doubt to a return to civilian life of a good many soldiers. It was therefore to be expected that the birth-rate for 1921 would swing back to something like normal. Economic considerations and lack of housing accommodation were also considerable factors in roducing the birth-rate. It will probably be in the national interests that the birth-rate should not be unduly large for the next decade, but all efforts should be made to encourage the best parents to have offspring, and, on the contrary, to discourage by proper means undesirable parents from having children, many of whom are subsequently neglected and very often become a charge on local or national expenditure.

Reference to Table 2 of the Appendix will reveal the following highest and lowest birth-rates:--

Highest.			Lowest.	
Barking Urban		26.7	Wanstead Urban	13.4
Harwich Borough		24.4	Clacton-on-Sea Urban	14.6
Shoeburyness Urban		23.8	Saffron Walden Borough	15.8
Grays "	• • •	23.5		

Deatharato.

The death-rate from all causes in the Administrative County for 1921 was 10.2, as against 10.6 in the previous year. This is a most remarkable figure and shows that Essex must be one of the healthiest counties in England. Highest and lowest death-rates, 3 recorded in Table 2 of the Appendix, are as follows:—

Highest.			Lowest.	
Urban-Wivenhoe	• • •	16.1	Urban—Slasburyness	7.3
Brightlingsea		13.4	Walton-on-Naze	7.3
Epping		13.4	Frinton-on-Sea	7.9
Witham		12.9	Claeton-en-Sea	8.4
Rural - Stansted		14.1	Tilbur y	8.4
Saffron Walde	n	13.2		
Dunmow		12.8		

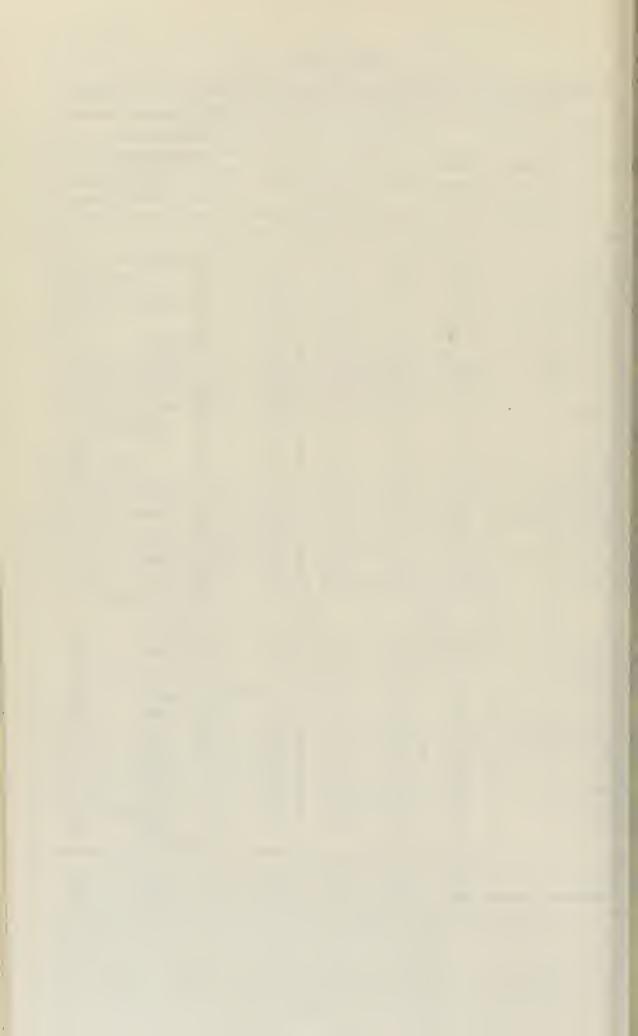

The exceptional features of the above figures are (1) the highest death-rates courred in two adjoining riverside districts, whilst (2) the lowest death-rates are recorded at four seaside resorts and the Port of Tilbury, the latter being much less than the previous year when it registered the highest death-rate (16.4) in the County.

Infant Mortality.

The rate of infant mortality for the whole of the Administrative County for the part 1321 was 59.5, being slightly in excess of the figure (58.9) for the previous year. It is worthy of note that in one district (Bumpstead Rural) there were no deaths of infants under 1 year of age during the year. Other districts (see Table II. on page 10) have remarkably low rates, a unely:—Claeton-on-Sea Urban 17.4, Loughton Urbat 19.8, Maldon Borough 25.4, Frinten-on-Sea Urban 28.5. Experience during thi year in respect of infant mortality in this County is all the more remarkable in mucles those factors which in former years were invariably speciated with a high

DEATH-RATE PER 1,000 POPULATION. DEATHS OF INFANTS PER 1,000 BORN.

		Deat	h-rate.		Infantile	Mortality.	
SANITARY DISTRICTS.	Birth- rate. 1921.	1921.	1911-20 (Averago).	1921.	Legiti- mate.	Illegiti- mate.	1911-20 (Average).

e brothers and sisters. The reasons for this marked change are :-

- (1) the education of mothers in mothercraft and infant hygiene;
- (2) the greater consumption of dried milk; and

UKW 0 L

. .

, wor where we make you ..

(3) tarring of the roads and main streets of towns, which considerably curtails the dust nuisance.

There is no doubt that the trifling amount spent on Child Welfare has been of the most remunerative items in Local Government and National Expenditure

SEWACE WORKS AND RIVERS POLLUTION.

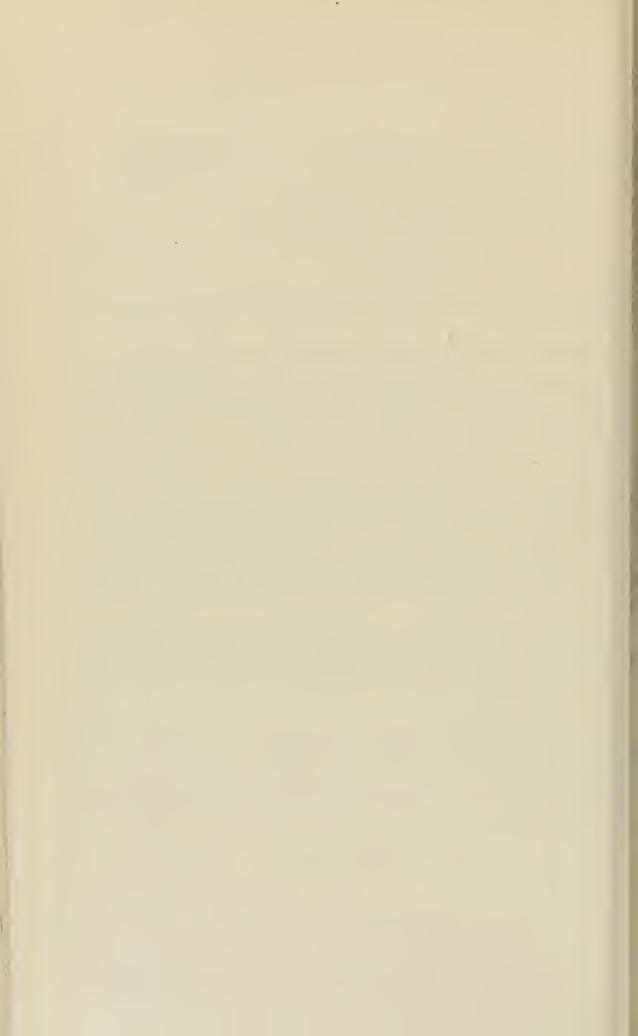

The agreement has been continued with Drs. Thresh and Beale, 91, Queen oria Street, London, E.C. 4, under which they carry out two inspections hally of the River Roding and collect, examine and report upon all samples taken; examine and report upon all samples of river water and sewage effluent collected or for the County Medical Officer from other sources in the Administrative County.

Inspections were made of the Sewage Works which discharge their effluent into River Roding on 1st March, 1921, 10th May, 1921, 27th October, 1921, and 7th amber, 1921, when 30 samples of river water and sewage effluent were collected. results of the examinations of these samples were classed as passable with 15 ptions, in which cases suitable communications were addressed to the Local tary Authorities concerned.

During the year 14 inspections were also made of the sewage works in the lining parts of the Administrative County, from which 15 samples were taken. Of 2 were classed as good or passable and 13 as bad. In the latter cases approte action has been taken.

RIVER COLNE. Repeated complaints of offensive smells necessitated keeping river under close observation. The source of pollution was traced and the firm onsible took effective steps to prevent their trade effluent entering the river.

RIVER CHELMER has been inspected many times at various points and action has a taken to prevent the continued pollution by two parishes near the source of the

Rural Councils were much concerned in regard to the water supply of villages.

wells, ponds and streams dried up, and in several instances it became ary to transport water considerable distances. Enquiries from the oldest its in some of the districts elicited the statement that such a scarcity of water of to their knowledge occurred before. The position became so acute in and Wales that the Ministry of Health deemed it advisable to ask all Local ary Authorities to furnish information on the following points:—

- (a) The name and description of the source of the water supply.
- (b) The average yield in gallons per twenty-four hours for the year 1920.
- (c) The minimum yield per twenty-four hours during the year 1920.
- (d) The minimum yield per twenty-four hours resulting from the present drought.

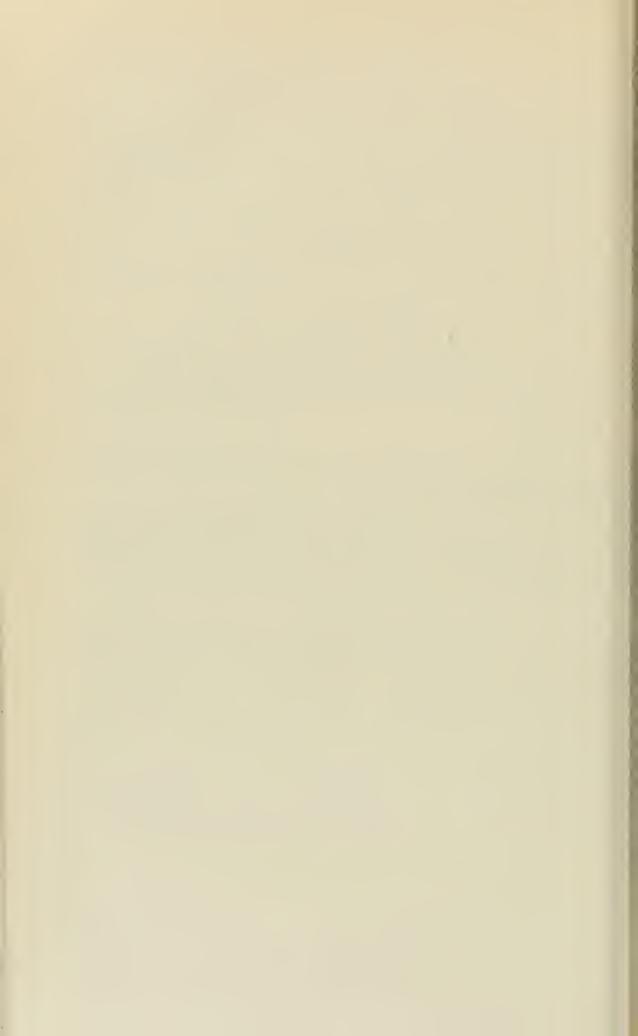

Fortunately, the deep wells in Essex were not affected to any great extent as the r supplying them comes a long way underground and consequently the effects of lrought may still have to be experienced

Opportunity was taken by the County Medical Officer and his staff to lect the various watersheds from their source onwards in the Administrative (aty. Samples were taken at various points of the rivers and tributaries merated in the Table below:

TABLE III.

IWING DATES OF INSPECTIONS, NUMBER OF SAMPLES TAKEN, MINIMUM FLOW, ETC.

I the tributaries of the River Crouch were dried up, proving that in the driest this river is absolutely uscless as a source of water supply.

marked contrast the Rivers Chelmer and Blackwater maintained a considerow of water, and therefore may be considered as possible sources of water should other means fail to be adequate for the County's needs. An endeavour ade during the year to utilize a river for this purpose.—See following paragraph.

IVER STOUR. In May, 1921, the South Essex and Southend Waterworks unies applied unsuccessfully to Parliament for powers to abstract and impound from the River Stour to augment the supply for the southern portion of the y. The Committee considered the financial difficulties insurmountable.

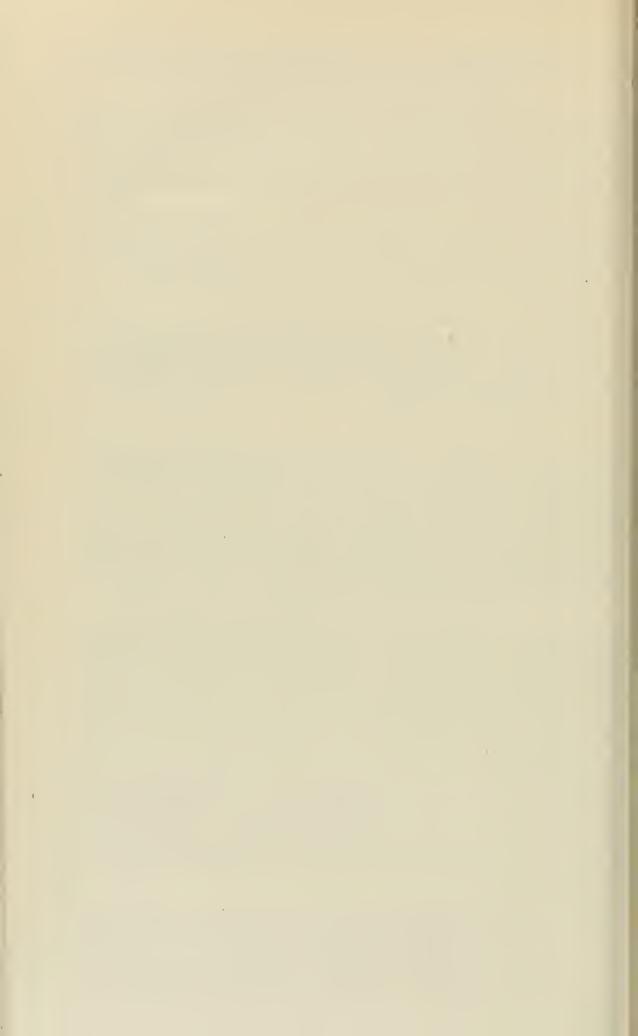

aspections of the river were carried out at different periods and samples of water mamined to provide data for the detailed evidence furnished by the County al Officer in support of the County Council's aim to safeguard the interests of ounty. A good flow of water persisted throughout the drought, indicating that of the water is of deep seated origin.

unity of Water Supplies. With a view to assisting Local Sanitary rities, the Ministry of Health issued a circular in September, 1921, suggesting the best methods of dealing promptly with drinking water which becomes ed, or which is suspected of spreading disease, are by boiling or by chlorination.

e, however, alternative sources of pure water are readily available, they should in it also, where the total quantity of water required is small, it should be borned in this connection that rainwater, collected and stored under proper tions, provides a very pure supply of drinking-water.

HORTAGE OF WATER. As before stated, the Ministry of Health addressed ries to 2,000 Water Authorities and addailed information has therefore been red from all parts of the country. A report on the results of these enquiries resented to a conference held on 25th January, 1922, at the Ministry of Health, 10h the County Medical Officer was invited, and which was called "to consider measures could be taken in view of the shortage of water which now exists and is not unlikely to increase in the near future." In that report it was stated 1) in 125 districts there was a water shortage, (2) 52 districts had a supply was less than half the normal, (3) some districts were not feeling the shortage such as those fed by the Pennine watersheds and the high moorland districts, t(a) in several other districts the situation was serious. The chief points seed in regard to the measures that may have to be taken in districts where there actual shortage of water were:—

(1) The question of utilising sources of supply which would not generally be available for domestic purposes. For example, recourse may be had to a river which is generally not regarded as fit for drinking purposes. In such a case the water would have to be treated.

- (2) The question of compensation water would have to be considered. The view of some experts has been expressed that a lot of water was being discharged as compensation water, in some cases to an unjustifiable extent, having rogard to the needs of the community.
- (3) The general question of the pollution of underground water. Some kind of legal protection might be essential.

The conference finally decided that circulars (which were published in March and April, 1922) should be drawn up for the guidance of Local Sanitary Authorities and Water Authorities dealing with the following points:—

- (1) Conservation of existing supplies.
- (2) Supplementing existing supplies.
- (3) Assistance from the Ministry of Health.

SMALL-POK.

Small-pox is one of the most infectious diseases. Cases are always to be found in some parts of the world, and may therefore be introduced into England from abroad at any time.

It is satisfactory, therefore, to be able to report that not a single case of small-pox occurred in the Administrative County of Essex during the year. Notifications were received regarding 7 persons who had been in contact with cases occurring outside the County and who were entering the County. These were referred to the respective local Medical Officers for observation and necessary action.

As there appears to be some confusion in the minds of many people regarding the nature of the disease called "Alastrim," a few notes taken from a forthcoming work upon the subject by Dr. W. McConnel Wanklyn, Small-pox Consultant of the London County Council, are given below:—

"Alastrim" is a word which has found its way into the lay press and into lay conversation during the last two years, and the impression has been conveyed that a new disease has been discovered. The contrary is the fact; "Alastrim" is a new name for an old disease; "Alastrim" is simply small-pox.

This particular expression first appears in medical literature in the year 1910, having been used by Dr. Emilio Ribas, Chef du Service Sanitaire of the State of São Paolo, Brazil, is his report of a mild highly infectious fever then prevalent in that country. The word "alastrim" was the name commonly applied to this disorder in the Sertao of Bahia. Dr. Carini investigated this outbreak, and after detailing its clinical features, declared that it was impossible to doubt that the disease was variola vera, true small-pox.

An examination of cases described as "alastrim," as well as of the literature and photographs upon the subject, brings Dr. Wanklyn to the following conclusion:—
The word "alastrim" has no justification for existence or perpetuation in the

English language. It means nothing. There is one well recognised disease, chicken-pox, and another well recognised disease, small-pox; there occur a number of cases which are difficult for untrained observers to place with certainty in either the one group or the other; therefore recourse has been had to such terms as "varioloid," "varioloid varicella," "alastrim," and others. But there is no such intermediate or third disease, and therefore no occasion for a word to describe it. Mild forms of small-pox have often been termed a-typical; but such cases have been reported in large numbers from all parts of the world, and on close examination are found to conform regularly to the type of the disease. Dr. Wanklyn refers to the pioneer work of Dr. T. F. Ricketts, who on the basis of a long experience laid down a reliable system for the differentiation of small-pox from chicken-pox and other diseases simulating it. Part of the method is to chart on a diagram of the human figure the spots which appear on the patient under examination, and to make as close an actual count as circumstances permit. The true nature of the disease can usually be deduced therefrom, especially when taken into account with other signs and symptoms. In small-pox the spots are centrifugal, that is, they usually increase in number towards the extremities, whereas in chickenpox they usually increase in number towards the trunk of the body.

Dealing with the question of vaccination in his recent address on "The present position of Small-pox and Vaccination as affecting this Country," Dr. Wanklyn views with concern the increasing number of unvaccinated persons. He considers that the population in this country is susceptible to small-pox in a high degree. There are, in the main, but two classes of our community who are protected. One is rather less than half the infants, and the other is the personnel who served in the War. He estimates roughly "that in a population of 36,000,000, it is the case that 28,000,000 are partly or fully susceptible to an attack of small-pox if they be fully exposed to its infection; that is a most serious state of affairs, and makes the protection of these helpless people a task of the gravest anxiety."

It is gratifying to record that the London County Council have continued the arrangement whereby the services of Dr. Wanklyn are loaned to any Medical Officer of Health in the Administrative County on application to the County Medical Officer. During the year 5 applications were received, and in each instance Dr. Wanklyn was satisfied that the case was not small-pox. To have such an experienced man so readily available is very helpful, and is much appreciated by all concerned.

C UNTY LABORATORY.

This Laboratory has continued to give satisfaction throughout the whole year and Table IV, shows the number of specimens submitted for examination from each Sanitary District. It will be seen that the number of specimens continues to increase, showing that the services of the County Bacteriologist, Dr. J. F. Beale, are being appreciated more and more. The work is carried out at 91, Queen Victoria Street, London, E.C. 4; Telephone No. City 7116.

		ROSE SANCE		

Special permission was given to a Local Sanitary Authority to submit to the County Laboratory samples of milk from about 270 cows in their area. Thirty-three samples only were submitted for examination, and of these three were found to contain acid fast bacilli resembling microscopically the bovine tubercle bacilli, and three others were certified as unfit for human consumption. It was deemed necessary to have four samples submitted to guinea-pig inoculation with the result that the milk was certified to be unfit for human consumption.

Seventeen samples of milk have also been obtained from vendors who supply tuberculosis patients with extra nourishment on request from the County Council. In one instance acid fast bacilli, resembling microscopically tubercle bacilli, were found and the supply was stopped. The local Medical Officer of Health, accompanied by a Veterinary Surgeon, visited the farm from which the milk was obtained; further samples were taken and the results of the examinations confirmed the above diagnosis.

MOUSING.

The Ministry of Health again require local Medical Officers of Health to furnish in their Annual Reports in a prescribed form particulars regarding the housing conditions of the district, dealing with the matter under the following main headings:—

- (1) Houses erected.
- (2) Unfit Dwelling Houses.
- (3) Remedy of Defects without service of formal notices.
- (4) Action under Statutory powers.

At the time of writing very few Annual Reports have been received from the Local Medical Officers of Health, so that it is not possible to present a summary for the County. Reference, however, to the 1920 Reports shows that 32 of the 47 districts supplied information on Housing, and from these the following interesting figures have been extracted:—

Number of	houses	erected o	during 199	20		• • •	888
1)	11	inspecto	ed	• • •	• • •	• • •	03,504
31	"	definitel	y unfit for	r huma	n habitation		694
11	"	not reas	onably fit	for los	man habitatior	1	5,876
93	defect	s remedie	ed without	t forma	l notices	• • •	7,003
7.3	23	11	with		11	• • •	£ 4

There is evidence in the Annual Repeats received for 1921 that this rate of inspections and repairs is being maintained with good results. The renovation of old cottages is certainly a factor in helping to solve the housing problem in these days of economy. It has been found that old cottages formerly condemned can, with a proportionate outlay, be made fit for human habitation and can also have the accommodation and conveniences improved and increased. Therefore, until the existing overcrowded conditions are a thing of the past, no house should be condemned outright if there is the slightest possible chance of re-establishing it in a habitable condition. From the small number of copies of Closing Orders received

from Local Sanitary Authorities under Section 69 of the Housing, Town Planning, etc. Act, 1909, it is evident that this phase is being observed by the Public Health Officials throughout the County.

As was stated in the Report for 1920, the greatest housing development in the County has taken place at Beacontree under the London County Council Scheme. Primarily it was intended to form a new township with accommodation for about 130,000 people. Present day conditions have, however, enforced a restriction of the scheme, but the nucleus has been established around which the greater scheme may levelop at a more opportune time.

According to information kindly supplied by the County Architect, the Essex County Council have provided the following houses for small-holders during the year 1920-21:—

No. of Houses	erected	• • •	 * * *	65

SALE OF FOOD AND DRUGS ACTS.

As in previous years, the supervision of the dutios under these Acts was not underaken by the County Medical Officer. Dr. Bernard J. Dyer, the County Analyst ecoives samples direct from the Food & Drugs Inspectors, and he has kindly furnished he following particulars of the work done during the period 1st Docember, 1920, to 0th November, 1921. Included in the table set out below are samples which have seen submitted from two sources, viz., County Inspectors and Local Sanitary Authorities.

During the year the services of the Food and Drugs Inspectors were requisitioned a connection with obtaining samples from milk vendors who supply the County Sanatoria and also certain tuberculosis patients to whom extra nourishment had been ranted by the County Council. By this means the County Medical Officer satisfied timself that the milk supplied was genuine, with one exception (see page 17).

On 9th September, 1921, the County Medical Officer gave evidence at the Chelmsford Court in the case of a sample of milk which was found to contain boric wid. The offender was fined £5 and costs.

STRUCTURES EXHAPING TO SAMPLES REPORTED ON DURING THE WHOLE YHAR AS ADULTERATED OR UNSATISFACTORY.

One sample of butter contained more boric acid than is regarded as legitimate, 0.8 per cent.

Six samples sold as cream consisted of "preserved cream" containing boric acid quantity varying from 0.2 to 0.1 per cent. without the necessary declaration being en by the vendors, as required by the Milk and Cream Regulations.

One sample of lard, sold as lard, consisted of lard compound and contained 30 cent, of cocoanut or palm nut oil.

Thirty-four samples of milk contained added water as follows:-

Thirty-four other samples of milk were deficiont in fat—the percentage of ficiency, compared with the minimum normal quantity in genuine milk, being:—

In 8 cases 5 to 10 per cent.

,, 10 ,, 11 ,, 15 ,,

,, 5 ,, 16 ,, 20 ,,

,, 3 ,, 21 ,, 25 ,,

,, 4 ,, 26 ,, 30 ,,

,, 1 case 31 per cent.

,, 1 ,, 50 ,,

,, 1 ,, 60 ,,

,, 1 ,, 70 ,,

Four other samples of milk were low in both fat and non-fatty solids but gave therent evidence of abnormality. Subsequent samples taken from the cows were lso found to be abnormal.

Three samples of milk contained preservative in the form of boric acid—the nantity present being respectively 4, 5 and 6 grains per pint.

One sample of lemon squash contained salicylic acid in the proportion of 4 grain per pint, the presence of which was not declared.

One sample of lime juice contained salicylic acid in the proportion of 3-3 grain per pint, the presence of which was not declared.

Five samples of vinegar were deficient in strength to the extent of 8, 12, 5, 1, 13 and 13 per cent. of the minimum proper strength as regards acotic acid.

ISOLATION HOSPITALS.

Inder Section 21 of the Isolation Hospitals Act, 1893, the County Council may, a they deem it expedient so to do for the benefit of the County, contribute out County Rate, a capital or annual sum towards the structural and the establishment uses of an Isolation Hospital or to either class of such expenses.

Section 2 of the Isolation Hospitals Act, 1901, extends the above provisions so include the power to contribute to any hospital provided by a Local Authority ding a joint board) within the meaning of the Public Health Act, 1875, for the stion of patients suffering from infectious disease, whether within the area of the ty Council or not, but the consent of the Local Government Board (now stry of Health) shall be required to an annual contribution under this section by county Council to a hospital, the cost of providing which, or of any permanent sision or enlargement of which, has been defrayed otherwise than out of borrowed by.

Particulars of the schemes for payment of grants to Isolation Hospitals under bove Acts have been outlined fully in previous reports. The scheme laid down oth November, 1904, providing a grant of £5 per bed was amplified in 1919 so as clude a grant of £10 to each hospital possessing a motor ambulance.

At the present time, the Administrative County is served by the following ion Hospitals:—

It the Annual Inspection in 1921, members of the Committee were impressed by the rge number of unoccupied beds in several hospitals and by the fact that despite and number of patients under treatment practically the full hospital staff had maintained. In the discussion which followed, emphasis was laid upon the new on which had been created by motor ambulances. It is now quite as convenient a patient thirty or forty makes with ease, comfort, and safety, as it was fely to move a patient three or four miles by horse ambulance. In these

* In some instances the figures relating to tuberculosis can streated under the County Council scheme are included.

roumstances, there is no doubt that if Isolation Hospitals were now being built in the ounty for the first time, the whole population could be served by less than one half the existing hospitals.

During the year 1920 it was often the case that an Isolation Hospital in one part the County was overtaxed with patients, whilst a hospital in an adjacent district t more than fifteen or twenty miles away was empty. Interchange of beds, which ould solve this difficulty, is however an exception and not the rule.

The County Council, however, decided to continue the present system of grants there was no doubt that it had led to a considerable number of improvements in staffing, administration and equipment of the Infectious Hospitals. It had also encouraged authorities to provide motor ambulances, (2) brought about uniformity many ways, (3) ensured regular renovations, and (4) the annual inspection had proved the institutions generally.

A further annual inspection is about to be made and in Table V. is given ormation supplied by the Clerk to each Hospital Board with his application for a nt

The question of making grants to those hospitals which were not erected out cans has also received consideration, and the Ministry of Health have been asked their approval to such grants being made, subject to the conditions which apply lt the other Isolation Hospitals.

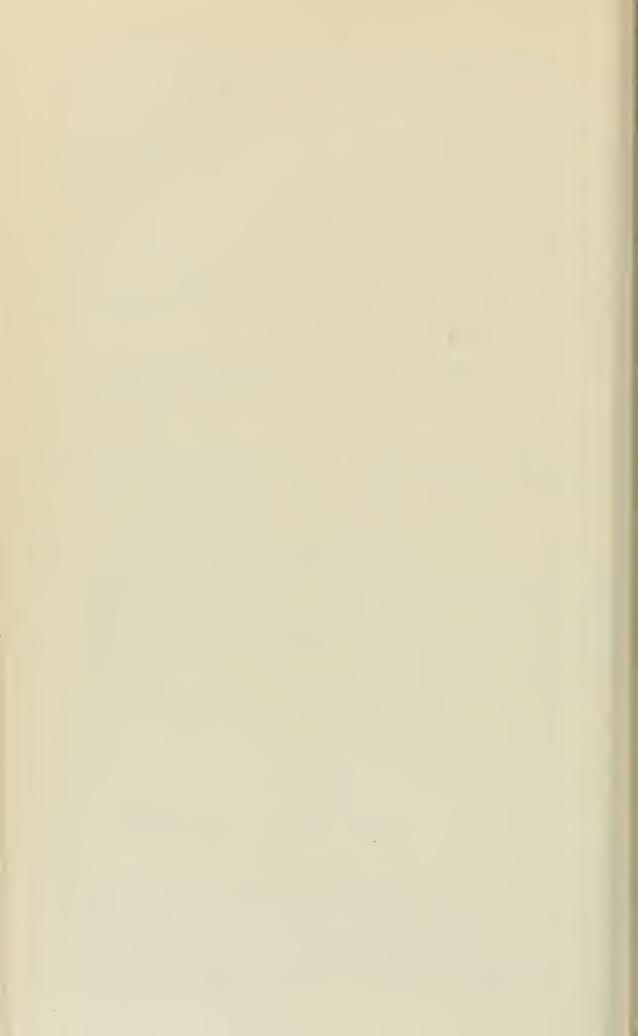

VOLUNTARY HOSPITALS.

On the 25th January, 1921, a special Committee (under the Chairmanship of Right Honorable the Viscount Cave) was appointed by the Ministry of lth to consider the present financial position of the Voluntary Hospitals and take recommendations as to any action which should be taken to assist them. Committee, by report dated 31st May, 1921, made thirteen recommendations, of which were the following:—

- (1) That a Hospitals Commission and Voluntary Hospitals Committees be formed.
- (2) That County Councils be empowered to contribute to the expenses of the Voluntary Hospitals Committees.
- (3) That Parliament be asked to sanction a temporary grant of £1,000,000 to be expended at the discretion of the Hospitals Commission and in the assistance of hospitals which require it.

By letter, dated 29th July, 1921, the Voluntary Hospitals Commission laid down ations governing the establishment, position and functions of the Voluntary itals Committee to be appointed for the Geographical County of Essex. The mittee was eventually appointed and held its first meeting on 10th January,

Subsequently, the following list of General and Cottage Hospitals in the raphical County of Essex was furnished by the County Medical Officer to the atary Hospitals Committee:—

LIST OF GENERAL AND COTTAGE HOSPITALS IN THE GEOGRAPHICAL COUNTY OF ESSEX.

	Count	ry of Essex.	
	Name of Hospital.	Address.	No. of Beds.
(1)	ESSEX HOSPITALS.

			-	_					_		

March, 1921, the London County Council intimated that the scheme for diagnosis and treatment for the current year followed substantially the scheme at prosent in operation. It was estimated that the gross expenditure to the London County Council and the participating authorities would amount to £126,583, of which £94,938 was attributable to London. The estimated amount chargeable to Essex was £1,500, three-fourths of which would rank for Government grant. The actual cost to Essex is payable according to user at the end of the financial year. There can be no doubt that this mutual arrangement is both beneficial and economical to all the participating authorities, and is continuing to work satisfactorily to all concerned.

Agreements were also continued with the Chelmsford and Colchester Hospitals. At the latter hospital, by mutual arrangement between the County Council and the Hospital Board, improved accommodation was provided for the diagnosis and treatment of Venereal Diseases as and from 29th August, 1921.

It will be seen from Table VI. on page 26 that the total number of Essex patients treated for the first time is 226 less than the figure for 1920, but, on the other hand, the total attendances of the patients have increased.

The figures for the year may be regarded as generally satisfactory, but a most disappointing feature of the clinic work has been the large number of patients who discontinue treatment before the Medical Officer certifies them as cured or non-infectious. The proportion of such patients varies at the different contres, and presumably is influenced by the personnel of the clinics and also the personnel of the patients themselves. It may be said, however, that on the average 60 per cent. of the patients attending gratuitously at these public clinics discontinue their treatment before they are cured. This is a tromen lous danger to the patients themselves as the disease will almost certainly recur in later months or years and ultimately they will undergo unnecessary suffering, and their death will be accelerated. From the standpoint of the State it means that they will be potential sources of infection, maybe to innocent wives and children, and also the State will have to nurse and maintain a good many of them in the various infirmaries, asylums and other institutions.

Educational propaganda is probably reaching the limits of its beneficent influence and it is more than possible that the general public are prepared for a radical step forward in the central of Venereal Disease. As in the case of Small-pox, Plague, Tuberculosis and many other diseases, that step is compulsory notification to the health authorities. It may be that for a period this notification should be a modified one, but there is every probability that in a low years Venereal Disease will be notified in just the same way as the other contagious diseases.

By Circular 202, dated 31st May, 1921, the Ministry of Health intimated that they had considered the practicability of adopting morantes of self-disinfection amongst the civilian community, but after reviewing the question from all espects they have decided as follows:—

"It is clear that this question is one which cannot be decided solely by "reference to medical opinion—moral and social considerations of very "great importance are involved in it. In the circumstances, the Government have decided that they cannot give official support to self-disinfection "as a policy."

The Ministry, however, emphasise the importance of educational and propaganda work. In this connection the National Council for Combating Venereal Diseases arranged at their own expense for a tour to the coastal towns in the County by means of a cine-motor caravan. This commenced on 22nd August, 1921, and subsequently the following report was submitted by the National Council:—

"The educational campaign proper was inaugurated on Monday, August 22nd, at Shooburyness; a meeting attended by about 80 persons was held. The original audience had been very much larger, but the unavoidable delay in the lecturer's arrival, on account of a breakdown on the road, caused many people to leave the hall before the meeting opened. In spite of this fact a collection of 9s. 10d. was taken.

"During the remainder of the period meetings were held at Grays (attendance 800), Clacton-on-Sea (attendance 150), Colchester (attendance 600), Walton-on-Naze, at which the Vicar took the chair (attendance 800), Brightlingsoa (attendance 550), Wivenhoe Shipyards (attendance 400), and Wivenhoe, public meeting (attendance 80 to 100). Small meetings were held at Hatfield Peverel, Great Bentley and Ingatestone. The Tilbury meeting was unavoidably cancelled at the last moment owing to a breakdown of the caravan."

The County Council again made a special grant of £20 to the Ilford Propaganda Committee for the financial year 1921-22.

PLAGUE.

During the year a dead rat was forwarded to the County Laboratory with a request for an examination with a view to determining whether the rat was infected with Plague.

For the information of local Medical Officers of Health, it has been ascertained that all examinations of this kind are undertaken at the Government Laboratory, 22, Casticle Place, London.

TRADE, MOUSE AND OTHER REFUSE.

The late County Medical Officer, in February, 1911, drew attention in a special report to the importation of house refuse and manurial matter from London into Essex. Enquiries proved that the waste matters so imported consisted of house refuse, road scrapings, gully sludge, market garbage, trade refuse from fish and greengrocers' shops, restaurants, &c., manure, builders' waste, &c. It was estimated at that time that London was producing 1,250,000 tons of refuse per year, about one-third of which was burnt in destructors, leaving about 800,000 tons to be removed to tips. By far the greatest proportion of the 800,000 tons was being dumped on the

Essex marshes along the northern bank of the Thames causing nuisances to arise from various causes, namely: -

- (a) unloading of barges into trucks;
- (b) tipping of trucks on embaukments;
- (c) effluvium from fermenting refuse;
- (d) smoke from burning tips;
- (e) plague of flies in summer;
- (f) rat infestation;
- (g) dirty paper scattered by winds, &c.
- (h) fleas taken from tips by children when playing or working there;
- (i) alleged infection of children (chiefly) by infected material in rubbish;
- (j) pollution of marsh ditches.

These tips (including those in the neighbourhood of several towns in the County) are undoubtedly offensive to the eye and to the nose when near them, though greater care is being taken in the selection of sites for tips, and in some instances earth and lime are being used for covering the refuse. Complaints still arise at intervals showing the need for regulating this tipping. Apart from the unsightliness of the refuse, it undoubtedly causes unpleasantness and discomfort, and further, might be a danger to health both in course of transit and at the actual tips. It is suggested, therefore, that when opportunity occurs further powers should be acquired in accordance with the following clause, which has been submitted to the Clerk of the County Council for consideration, and which aims at placing such tipping on as hygienic a basis as possible:—

"No Local Sanitary Authority (or contractors thereof) within or "outside the Administrative County of Essex shall at any time hereafter "dump trade, house, or other refuse in any part of the Administrative "County of Essex without the special permission of the Local Sanitary "Authority in whose area the refuse is to be deposited and the County "Council of Essex, and unless such Local Sanitary Authority and County "Council are satisfied regarding the quantity and nature of refuse to be "deposited, mode of conveyance, and that no nuisance is likely to be created "within the meaning of Section 91 of the Public Health Act 1875, either in "course of transit or at the dump itself. The County Council and Local "Sanitary Authority shall have power to make any necessary bye-laws."

It is understood that the various London Boroughs are again considering what united action can be taken to meet the ever increasing difficulties attached to the refuse disposal from such a large aggregation of population. To dispose of this refuse by burning in destructors would be no light undertaking, but if found practicable it would undoubtedly be a most satisfactory solution to this vexed problem.

In small County to as everything is in favour of the disperal of refuse by burning in suitable destructors, whilst in villages the election of a small incinerator on a suitable and accessible site is a ready method of getting aid of rubbish which

otherwise is scattered in an unsightly manner in back yards, gardens, and convenient dumping places. At the Harold Court Sanatorium such an incinerator (which was erected by patients) has worked successfully for about two years, and it is remarkable how much refuse can be consumed with the little attention required.

Enquiries made in April, 1922, elicited the following information regarding tips in three rural districts in the southern part of the County:—

MENYAL DEFICIENCY ACT, 1913.

Dr. T. P. Puddicombe, Chief Assistant County Medical Officer, has continued to examine and report on all cases of suspected Mental Deficiency, his services being available both for the County Education Committee and the Local Control Authority, and also, through the latter, for advice on any case of suspected mental defect brought before the Justices.

During the year the number of cases sent for Institutional care has been restricted due to the orders of the Board of Control, but the work of ascertainment and certification has, however, continued.

Under the local Control Authority 116 individual cases (Males—48, Females—68) have been investigated, reported on and classed as follows:—

Class.		Males.		Females.
Feeble-minded	• • •	18		43
Imbeciles		22	• • •	16
Idiots	* * *	3		2
Moral Imbeciles		1	* * 1	0
Not classified under the Act	• • •	4		7

Valuable assistance has again been rendered by the Voluntary Association for the care of the Mentally Defective, who by the aid of their many local Committees and Visitors keep in close touch with all cases needing supervision. This Association has helped to create a better informed public opinion by holding conferences and meetings in various places during the year. An important conference was held at River Plate House, Finsbury Circus, London, on 12th October, 1921, when addresses were given and discussions took place upon after-care, employment, etc.

PART M.

COMBINED MEDICHL SERVICE.

- (i) Diject of Scheme. To secure by an agreement between Local Sanitary Anthorities and County Council that one Medical Officer, who must possess the Diploma of Public Health, shall, in each Sanitary District, act in the following dual capacity:—
 - (a) Local Medical Officer of Health, being directly responsible to the Local Sanitary Authority for all duties carried out under such appointment;
 - (b) Assistant County Medical Officer, working under the supervision of, and being responsible to the County Medical Officer for duties of Tuberculosis Officer, School Medical Inspector, Child Welfare Officer, Inspector of Midwives, Venereal Diseases Officer, etc.

Salary, £700 per annum, borne by the County Council and Local Sanitary Luthonly or groups thereof in equal proportions, unless otherwise agreed upon. Statically and postages are provided by each Authority.

Applicants are selected and interviewed at a meeting of representatives of the Authorities concerned, and their recommendation is subsequently submitted to the espective Councils for confirmation.

(2) Full Schomes in Operation. Previous reports have given particulars of the appointment of Combined Medical Officers as follows: --

Sanitary District. Lexden & Winstree Rural (i)	Acreage. 69,485	 Population served, 1921. 19,475	Medical Officer of Health and Assistant County Medical Officer. A. J. Williamson, D.S.O., M.A., M.D., D.P.H.	Date commenced duty. 1st April, 1920.
Clacton-on-Sea	4,069	 17,049	 W. A. Milne,	•
Urban (ii)			M.B., D.P.H.	1920.
Tendring Rural (iii)	73,131	 21,720	 J. Ramsbottom,	1st Sept.,
			M.B., D.P.H.	192 0 .

- (i) Also acts as Assistant County Medical Officer in Wivenhoe Urban District.
- (ii) Also acts at Assistant County Medical Officer in the Brightlingsea, Frinton and Walton Urban Districts.
- (iii) Also acts as Assistant County Medical Officer in the Harwich Borough.
- (a) Lexden and Winstree Rural District. This is a half-moon shaped listrict, covering the Borough of Collhester on the north, west and south; it is chiefly agricultural and measures some twolve miles from north to south, and about six miles on the average from east to west.

Until the present appointment was made in April, 1920, separate Medical Officers were carrying out the various public health duties shown below, necessitating a good deal of overlapping and unnecessary travelling and expense:—

- (i) Local Medical Officer of Health.
- (ii) Tuberculosis Officer.
- (iii) School Medical Inspector.
- (iv) Inspector of Midwives.

The arrangement for a combined medical officer on the lines enumerated in paragraph (1) was entered into by the Rural District Council for a period of twelve months, on the expiration of which period any necessary adjustment between the Authorities concerned was to be considered. From the Rural Council's intimation, dated 21st April, 1921, that they had no points in this connection needing review, it may justifiably be assumed that they are satisfied with the scheme, which has also worked well from the County Council's point of view, and which will therefore be continued until either Council decides otherwise.

Dr. A. J. Williamson quickly applied himself to the consolidation of the public health activities in the area, and his two years' experience in this post affords valuable evidence of the workableness as well as the efficacioueness of the combined medical scheme. He says:—

"I cannot recall an instance that has recealed the incompatibility of "the various duties, nor has any friction arisen between the Authorities." The division of duties in the present case is as nearly as possible an equal "one, and the time taken in carrying them out is practically one-half for "County Council and one-half for District Council, so that the arrangement "whereby each of these pays one-half the salary and allowances of the "officer is a fair one. The fact that the combined scheme has been in "operation in this district for two years and that it has worked smoothly, is "proof sufficient that it is a workable arrangement."

As to the advantages of there being one local Medical Officer, Dr. Williamson says:—

- "Among the advantages are saving of time and travelling costs to the "Medical Officer, absence of confusion in the mind of the public as to "which Medical Officer attends to the various public health activities, avoidance of unnecessary annoyance alo, in that only one doctor invades the home.
- "Undoubtedly, there is saving in travelling expenses. I need only refer to my diary to show how economy is effected, e.g.:—
 - '1.2.22 ofternoon—To Wakes Colne, visited school and examined "2 children re eyesight --to Aldham, took sample of water from new well, "also visited a T.B. case to Marks Tey, where I interviewed the "District Nurse-Midwife.
 - "Total mileage, about 17, and time taken for 4 visits, 1 S.M.O., "1 M.O.H., 1 T.O. and 1 Inspector of Midwives, 2 hours."

Looking to the future, Dr. Williamson thinks that -

"A preferable arrangement would be to have as unit area a district of "50,000 population, with a senior and a junior Medical Officer. In this way "administrative expenses would be reduced as only one office would be "required, and the arrangement would be more convenient in case of "sickness of the Officers or for holidays. A elerk or part-time clerk could "then be employed, and this would relieve the Medical Officers of work that "at present makes needless demands on their time.

"Finally, I think the combined medical scheme is the best thing that has happened in the County since I have known it, and I could only wish to see it further improved."

It should be remembered that Dr. Williamson served as County Tuberculosis fficer in Chelmsford, Ilford, Barking and Romford areas from 15th January, 1914, 31st March, 1920, except for the period when he was on military service.

(b) Clacton Urban District. This rapidly-growing seaside resort is situated wards the North-Eastern corner of the County. When first the combined edical scheme was mooted, it was hoped to include the contiguous districts of rinton and Walton, so as to consolidate the whole of the public health activities of ese well-known seaside places. Unfortunately, the full scheme matured in acton-on-Sea only, but a lesser scheme was applied to Frinton and Walton and so to Brightlingsea Urban Districts by the Clacton Medical Officer also acting Assistant County Medical Officer in those three districts.

Prior to this scheme there were, as in the case of Lexden and Winstree Rural istrict, four Medical Officers travelling over the same ground in their different pacities. The advent of Dr. W. A. Milne on 1st June, 1920, brought about the quired co-ordination of duties, and as Dr. Milne stated in his Annual Report the combined appointment represented a radical change in the public health administration of a town of the size of Clacton."

It is recognised that the public health machinery at seaside towns needs to be fficient and efficient in order to cope with the added responsibilities presented by e influx of visitors in the Summer. Dr. Milne readily achieved this at Clacton, in the experience gained by his Council and himself affords ample evidence in your of the continuance of the combined scheme. Dr. Milne writes:—

"By virtue of the dual appointment we have been able to arrange for "the carrying on in the same premises of Maternity and Child Welfare, "which is in the hands of the local District Council, and of School Clinics" and Treatment of Tuberculosis, which come within the province of the "County Council.

"An arrangement has been made between the County Council and the "Clacton Nursing Association (of which I am a member) for the supervision "of mentally defective children and school nursing."

As regards consolidation of work, Dr. Milne considers this to be the main point, as--

- "(a) Overlapping of duties is avoided.
- "(b) One official instead of several visiting the homes is less likely to cause irritation.
- "(c) A broader outlook on preventive medicine is obtained and better work for the community, as a whole, is done.
- "(d) Children can be followed up throughout their whole career from birth to leaving school, and this can be more efficiently done by one person.
- "(e) Co-operation between County Council and Local Council enables more active measures being taken in the prevention and control of Tuberculosis.

"Candidly," Dr. Milne concludes, "I can think of no disadvantages, nor has "my Council to my knowledge had cause to regret the scheme. I can imagine "however, that the scheme would not work in all cases. Much depends on the "County Medical Officer of Health and the local Medical Officer of Health, their "readiness to co-operate, and their willingness to sink individed prejudices."

- (c) Tendring Rural District. This is the third largest Rural District in the County, being divided into 27 Parishes. It is mainly agricultural and lies in the extreme north-eastern part of the County, and measures roughly 10 miles by I miles. Here again four Medical Officers were engaged in their various duties, and there was not the slightest difficulty in the County Council arriving at an arrange ment with the Rural District Council.
- Dr. J. Ramsbottom commenced duty on 1st September, 1000, and in presenting to his Council his Annual Report for 1920 states:—"This is not only my firs "Report, but it is also the first Annual Report presented to you since the establish ment of the combined medical services in your district, whereby the local Medica "Officer of Health, in the capacity of Assistant County Medical Officer, acts as Schoo "Medical Inspector, Tuberculosis Officer and Inspector of Midwives for the sam area. There are great possibilities in this combined service, for, with adequat non-professional assistance, an efficient and unified, yet very economical, publication that the service should be evolved."

Since that time, Dr. Ramsbottom has had ample opportunities of proving the efficacy or otherwise of a combined medical service in such a widely scattered are: He is now of opinion that "the combined medical service in Tendring Rural work" very satisfactorily, and no cause for regret on the part of the Rural Council h. "been brought to my notice. As regards notified cases of Tube eulosis, these can leave tunder control without too many officials. As Assistant County Medice "Medical Officer, Lattend to the educational and medical sides of tuberculosis cases whilst as local Medical Officer I have control of the question of sanitation, housing

und overcrowding. Procedure in regard to school closure and exclusions is also simplified. When carrying out medical inspection of schools, I frequently meet sanitary defects which are outside school premises, and therefore outside the direct control of the School Authorities. As local Medical Officer of Health, I can deal with them. I have not found any instances where the duties as Assistant County Medical Officer have been incompatible with those of local Medical Officer of Health."

Dr. Ramsbottom has not found any disadvantages in connection with the heme, but on the other hand enumerates the following advantages:—

- "(i) The Assistant County Medical Officer is within reach of parents, "teachers, medical practitioners, manufacturers, farmers, property "owners, etc., the area being smaller.
- "(ii) He is resident in the district and therefore better known.
- "(iii) He is better acquainted with local circumstances and conditions; local "voluntary agencies, and other interested parties (many of whom are "members of the Rural District Council).
- "(iv) He is better acquainted with the local Medical Practitioners.
- "(v) It is most convenient in case of epidemics to have the services combined.
- "(vi) I consider there is a great saving in travelling expenses. Whenever "I undertake a journey to a particular part of my district I often act "in every capacity (i.e, as S.M.I., T.O., M.O.H., C.W.O.), the result "of this being—
 - "(a) Shorter journeys owing to a smaller area under one man.
 - "(b) All journeys can be undertaken by road.

new Council Houses at Elmstead

- "(c) Under the combined system, one journey often represents 3 or 4 "much longer journeys under the separate system undertaken "by the T.O., S.M.I., M.O.H., etc., and therefore by 3 or 4 "different medical men.
- "Example. On Tuesday, February 7th, I undertook the following "programme:—
 - "Visited Harwich Dispensary ... as T.O. Parkeston Council Schools ve Influenza as S.M.I. and M.O.H. New Building, Ramsey, re Well ... as M.O.H. Haggar, Wix ... as T.O. Mistley School va Influenza as S.M.I. and M.O.H. Manningtree Wesleyan School as ditto. . . . C. of E. School as ditto. "Inspected well and took sample of water from

as M.O.H.

"Three medical men would have to travel over the same distance to make "the same visits, whilst they would probably be stationed well outside the "area visited."

In conclusion, Dr. Ramsbottom suggests certain minor administrative improvements which are receiving consideration.

(d) County Council. From the County Public Health Department's point of view, the combined medical service has worked satisfactorily and efficiently, and has achieved all that was expected of it. With proper safeguards, it is a sound workable investment for both County Council and Local Sanitary Authority, establishing as it does a central pivot around which revolves the whole of the preventive and remedial public health measures of the area.

Remarks upon salient features of the whole scheme may be summed up under the following headings:—

- (i) Nature of work.
- (ii) Difficulties.
- (iii) Conclusions.
- (i) Nature of work. As Assistant County Medical Officer, duties in regard to Tuberculosis, Medical Inspection, Child Welfare, supervision of midwives and Venercal Diseases have to be carried out, and experience has proved that the bulk of the work is in connection with the two first-named.

For several years past public health legislation has tended more and more to discriminate between (1) personal and (2) impersonal factors by making the County Councils responsible for the former, and the Local Sanitary Authorities for the latter. This is most noticeable in the following comparatively recent Acts and Regulations which deal with persons and which create County Councils as the administrative authority:—

Midvives Acts, 1902 and 1918.

Notification of Births Acts, 1907 and 1915.

Education (Administrative Provisions) Act, 1907.

National Health Insurance Act, 1911 (Sanatorium Benefit).

Public Health (Prevention and Treatment of Disease) Act, 1913.

Mental Deficiency Act, 1913.

Public Health (Venereal) Regulations, 1916.

Maternity and Child Welfare Act, 1918.

Blind Persons Act, 1920.

Public Health (Tuberculosis) Act, 1921.

This discrimination between individual and environment has created a breach between the work of County Councils and Local Sanitary Authorities, each having its own Medical Officers covering the same ground and visiting the same places on different phases of preventive medicine. The examples already quoted by the

ombined Medical Officers substantiate this view, particularly in relation to aberculosis and medical inspection of school children. As regards the former, it is reatly to the advantage of each patient if he can be kept under observation by one ledical Officer from the clinical as well as environmental points of view.

Under the Public Health (Tuberculosis) Regulations the local Medical Officer of Health receives notifications of persons suffering from Tuberculosis, keeps a confidential register of them, and forwards particulars to County Medical Officer each reek. He is also required "to make such enquiries and take such steps as may be accessary or desirable for investigating the source of infection, for preventing the pread of infection, and for removing conditions favourable to infection." To secure co-operation between the local Medical Officer of Health and Tuberculosis Officer, Local Sanitary Authorities were urged to appoint the latter as Assistant Medical Officer of Health. This, however, was done in only a few cases, with the result that there were, in most districts in the County, two medical officers keeping each case of Tuberculosis under observation from different standpoints. This is avoided by the combined medical service.

Medical inspection of school children presents similar features. A school is a house" within the meaning of the Public Health Acts, and is therefore under he supervision of the Local Medical Officer of Health. The school is also aspected by the County School Medical Inspector who, at the same time, supervises he health of the children, but if he proceeds to investigate home conditions or earch for contacts of infectious cases he may be trespassing within the domain of he Local Medical Officer of Health. In respect to the closing of schools when an affectious diseases are prevalent, the Local Medical Officer of Health may, coording to Article 57 of the Code, advise closure on public health grounds, whilst under Article 45 (b) the County School Medical Officer may approve closure on financial grounds owing to reduced attendance. As a rule, each notifies the other when closure takes place.

(ii) Difficulties. These have been chiefly of a topographical nature, as the existing boundaries of the various Sanitary Districts have prevented the setting up of a standard area as regards acreage and population.

The present scheme is by no means the first to aim at securing a combination of districts for the purpose of appointing Medical Officers of Health. Section 286 of the Public Health Act, 1875, provides for powers to effect such a combination of listricts, namely:—

"286. Where it appears to the Local Government Board, on any representation made to it, that the appointment of a Medical Officer of Health for two or more districts situated wholly or partly in the same County would diminish expense, or otherwise be for the advantage of such districts, the Local Government Board may by order unite such districts for the purpose of appointing a Medical Officer of Health, and may make regulations as to the mode of his appointment and removal by representatives of the Authorities of the constituent districts, and as to the meetings from time to time of such representatives, and the proportion in which the expenses of the appointment and of the salary and expenses of such Officer are to be borne by such Authorities, and as to any other matters (including the necessary expenses of such representatives) which, in the opinion of the said Board, require regulation for the purposes of this section; and no

other Medical Officer of Health shall be appointed for any constituent district, except as an assistant to the Officer appointed for the united district.

"Provided that no Urban District containing a population of 25,000 and upwards, or (in the case of a Borough) having a separate Court of Quarter Sessions, shall be included in any union of districts formed under this section without the consent of the Local Authority of such District or Borough.

"Not less than 28 days' notice that it is proposed to make an order under this section shall be given by the Local Government Board to the Local Authority of any district proposed to be included in the union, and if within 21 days after such notice has been given to any such Authority they give notice to the Local Government Board that they object to the proposal, the Local Government Board may include their district in the union by a provisional order but not otherwise."

This provisi in has been taken advantage of in Essex and many other Counties, with satisfactory results. Its chief drawback, however, is the very large area which had to be created before Rural Sanitary Authorities concerned could meet the cost of a whole time Medical Officer, as is evident from four such areas in Essex, only one of which (Chelmsford, etc.), now remains:—

Group No. 1.	Sanitary Districts included Chelmsford Rural Maldon Rural Rochford Rural	Acreage. 83,015 82,342 55,003	Population. 24,618 16,470 22,854 63,942	Medical Officer. John F. Macdonald, M.D., Ch.B., D.P.H.
2.	Lexden & Winstree Rural Tendring Rural Clacton Urban	73,131	19,475 21,720 17,049 58,244	Now under combined medical service.
	Braintree Urban ,, Rural Halstead ,, , Rural Belchamp ,, Dunmow ,, Witham Urban	2,224 62,348 647 38,712 26,500 73,503 3,713 207,647	6,980 18,777 5,916 9,739 4,219 15,356 3,719 64,706	Combined medical service agreed upon.
	Saffron Walden Borough "Rural Bumpstead Rural 5 Sanitary Districts in Suffolk, Cambridge and Hertfordshire	7,502 59,975 11,874	5,876 \ 10,001 \ 2,33,298	bined medical ser- ace agreed upon.
		189,770	51,611	

The establishment of a combined medical service displaces such widely scattered as, saves travelling, and brings the Medical Officer into closer touch with health rk in a smaller area. Even the area for a combined medical service could be proved and be more economical if it were feasible to split up sanitary districts in ler to aim at an area of a standard size as regards acreage and population.

(iii) Conclusions. It might be argued that circumstances may arise in which and obligations of a Medical Officer of Health would clash with those pertaining to an Assistant County Medical Officer. So far none has arisen, but this y be due to the personal factors referred to by Dr. Milne.

Another possible objection is that any one man cannot be expected to be an mnibus expert," i.e., able to deal equally well with exceptional cases which may are in the duties of a Tuberculosis Officer or School Medical Inspector. The ly to this is that a fund of common sense and adaptability is quite sufficient for demands made on a Medical Officer in charge of scattered Rural districts. It sot suggested that this plan is suitable for the totally different needs of a populous ban area.

From a careful review of the experience gained and of the reports submitted by sting Combined Medical Officers, the following claims may be put forward in poort of this co-ordinative policy:—

- (1) That there is avoidance of overlapping and unnecessary travelling.
- (2) That the service is efficient, economical, and a sound investment from all points of view.
- (3) That the prestige of the Medical Officer is raised, and that the many and varied duties add greater interest to his work.
- (4) That the Public Health (Tuberculosis) Regulations and Treatment of Tuberculosis generally can be more efficiently carried out.
- (5) That the duties of Medical Inspection of School Children are of great assistance in combating outbreaks of infectious disease.
- (6) That the continuity of supervision and treatment of child-life and a common public health policy are maintained throughout the area.
- (7) That confusion in the miss of parents, teachers, medical practitioners, property owners, etc., is avoided.
- (8) That the relationships between the Local Sanitary Authorities and the County Council are more harmonious.
- (9) That the service could be improved if the boundaries of Local Sanitary Districts could be re-arranged.
- (10) That the same policy has, with equal success, been applied, wherever possible, to the County Council's dental and nursing service.

(3) Partial Schomes in operation.

- (a) Barking. By agreement with the Barking Urban Council Dr. R. J. Ewart, Local Medical Officer of Health, has undertaken (since 1st April, 1920), the duties of County Tuberculosis Officer for that district. The arrangement continues to work satisfactorily with benefit to all concerned.
- (b) Colchester. A similar agreement was made with the Colchester Borough on 13th July, 1920, since when Dr. W. F. Corfield, Medical Officer of Health, has also performed the duties of County Tuberculosis Officer in his district, with excellent results.
- (c) Tilbury. In December, 1921, the Tilbury Urban Council intimated that their part-time Medical Officer of Health had resigned, and that they had been advised by the Ministry of Health to approach the County Council on the question of the combined medical service. The County Medical Officer met representatives of the Tilbury Council in consultation on 5th December, 1921, when the possibility of grouping adjacent sanitary areas under one combined medical service scheme was discussed. Pending such a scheme fructifying, the County Council have agreed to permit Dr. W. B. Wood, the Assistant County Medical Officer for the district, to also act as Local Medical Officer of Health for Tilbury, from 1st April, 1922. This arrangement, which has already received the sanction of the Ministry of Health, is much to be commended, in view of the importance and size of Tilbury Dock and its attendant population.

(4) Prospective Schomes.

(a) North Essex. From the successful working of the combined medical scheme, its extension is the County is to be expected when opportunity affords. Therefore, it is highly satisfactory to report that agreements have been reached with groups of Local Sanitary Authorities, as shown below, which means that practically the whole of the northern half of the Administrative County will shortly have a combined medical service. As soon as the Ministry of Health give their approval, the appointments will be made—

Area No.	Sanitary Districts		Acreage.		Population.
1.	Halstead Urban	 	647		5,916
	" Rural	 	38,712		9,739

⁽ii) For duties as Assistant County Medical Officer only.

(b) Waltham Abbey. The County Medical Officer met the Waltham Abbey rban Dict Council in consultation on 9th January, 1922, when the following two themes were the most favourably received by them:—

Scheme (1).

Combining with adjacent Sanitary Authorities with a view to reaching the minimum population of 25,000.

Scheme (2).

Appointment of a combined Medical Officer for the Waltham Abbey Urban District who would perform County Council duties in Waltham Abbey and in a fairly large district surrounding Waltham Abbey.

The matter is at present receiving consideration.

PART III.

MUDERCUROSES.

Motifications.

A summary of the notifications of Tuberculosis made in the Administrative County of Essex during the period from 2nd January, 1921, to 31st December, 1921, is given below:—

MADEL VXXX.

Showing Summary of Notifications of Tuberculosis in Essex during the period from the 2nd January, 1921, to the 31st December, 1921.

		Notifications on Form A.											
		Number of Primary Notifications.									Total		
Age periods	0 to 1	I to 5	5 to 10	10 to 15	15 to 20	20 to 25	25 to 35	35 to 45	45 to 55	30 to 65	65 and upwards	Total Primary Notifications	Not flea- ti son F. A.

1921	664	+	163	+	827	+	

The figures for 1915 onwards relate to civilians only. †Not available at time of printing.

Douths.

Table IX. gives the numbers of deaths at all ages from (a) Pulmonary and (b) Non-Pulmonary Tuberculosis in the County of Essex, as compared with England and Wales since the inception of Sanatorium benefit in 1911.

- (a) Pulmonary. It will be seen that the number of deaths in the County of Essex for 1921 shews a decrease on the figure for 1911 of almost 33¹ per cent., even though there is an increase of 91 over the figure for the year 1920 which was to be expected from the greater number of notified cases.
- (b) Non-Pulmonary. Here again a comparison of the number of deaths in 1921 with those occurring in 1911 shews an even greater decrease, being over 50 per cent. less. It would seem that the facilities for the diagnosis and treatment of this disease which have been rapidly extending and improving during the past ten years, are having the desired effect.

WHENTMENT OF TURERCULOSIS.

Estimatos, 1921-22.

Provision was made in these estimates for the diagnosis and treatment of Tuberculosis, as follows:—

Nature of Services.				Amount.
				£
Tubercuiosis Officers			0 0 0	4,915
Nurses				2,120
Dispensaries	• • •			2,750

Extra Nourishment				1,100
After-Care and Propag	ganda	• • •	• • •	200
Sundries	* * *			360
				250,230
				-

Coneral.

Consolidation and co-ordination of the arrangements for the disposis and treatment of Tuberculosis were achieved during the year in various ways.

The National Health Insurance Act, 1920, enacted that Sanatorium benefit should, on a date to be appointed, cease to be included among the benefits conferred upon insured persons by Part I. of the National Insurance Act, 1911. An Order was made by the National Health Insurance Joint Committee fixing 1st May, 1921, as the appointed day.

By Circular 190, dated 31st March, 1921, the Ministry of Health intimated that and from 1st May, 1921, it would rest with County and County Borough Councils provide treatment for insured persons as well as for other members of the minunity. Accordingly, the work in regard to insured persons (including x-Service men) was transferred from the Essex Insurance Committee to the Essex ounty Council without the slightest interruption in the course of treatment of any trient. This was due in no small measure to the able manner with which Mr. A. J. Tylie, Clerk of the Essex Insurance Committee, dealt with the various points of the ansfer. Reference should also be made to County Alderman J. H. Burrows, hairman of the Essex Insurance Committee, and Dr. A. Butler Harris, Chairman the Sanatorium Benefit Sub-Committee, whose never-failing interest in uberculosis patients did much to secure better conditions in connection with the cheme for the treatment of Tuberculosis, and whose help and co-operation were ivaluable.

Another feature of the year was the Public Health (Tuberculosis) Act, 1921, thich came into force on 12th May, 1921, and which made further provision with espect to arrangements by Local Authorities for the treatment of Tuberculosis. By his Act all Local Authorities with schemes of treatment which had been approved the Local Government Board or Ministry of Health were deemed to have made dequate arrangements for the treatment of Tuberculosis so long as such schemes with any approved modifications) continue in operation. Other provisions were hade in regard to After-Care, Joint Committees, etc.

In the Tables set out below, an attempt is made to summarise the many and aried duties carried out by the Tuberculosis Officers and Nurses, and the treatment iven to patients suffering from Tuberculosis. The effect of the revised scheme which resulted from the conferences between members of the County Council, nsurance Committee and Medical and Panel Committee referred to in the report for .919) whereby the Dispensaries became chiefly consultative centres and clearing louses, has been evident throughout the year, resulting in a marked decrease in the attendances of patients. This has enabled the Tuberculosis Officers and Nurses to levote more time to other work, as is revealed in the following figures:—

6.30 to 8.30 p.m. (women only).

*Part-time Tuberculosis Officers.

Reference has already been made to the growing practice of using the Dispensaries as consultative centres and clearing houses which anticipated the suggestions contained in Circular No. 257, dated 3rd November, 1921. The Ministry of Health stated in that circular that patients should not be treated at the Dispensaries on a large scale and over prolonged periods with bottles of medicine, cod liver oil, etc., and medicines should not be given to ensure their attendance. They should rather be educated gradually out of the belief in the efficacy of drugs and be taught the value of personal advice and of instruction in a hygienic mode of life,

It can be claimed that in Essex this educative treatment has been applied with success as is revealed by the expenditure on drugs, etc., during the past four financial years, namely:—

	Act	ual Expend	liture.	Estimated.
Medicament.	1919-20.	1920-1	1921-2.	1922-3.
	£	2.	2	£
Drugs and Prescriptions Oil and Malt	 1586	1749	1015	500

Further, all patients (adults and children) with the exception of ex-service men and strictly necessitous cases, were required from 1st October, 1921, to pay for medicaments issued at the following rates:—

Oil and Malt, Parrish's Food, etc. ... Cost price
Prescription 1s. each.

From this source £16 10s. 8d was paid into the County Funds during the last quarter of 1921. So far there has been no evidence that the adoption of this system has inflicted any hardship, whereas on the other hand some patients have welcomed the opportunity of paying for treatment received.

Tuberculesis Nurses.

- (i) Health Visitors. A full list of Health Visitors in the service of the County Council on 31st December, 1921, is given on page 6. As will be seen rom that list all the Health Visitors (with five exceptions) undertake combined tursing duties in relation to Tuberculosis, School and Child Welfare—a practice which works efficiently and economically and which avoids overlapping.
- (ii) Complementary Nursing Service. The County Council has an agreement with the County Nursing Association whereby the services of 100 District Nurse-Midwives employed by affiliated Nursing Associations are utilised. The Health Visitor exercises general supervision, but the District Nurse carries out the necessary remedial measures.

Janatorium Treatment.

(i) Beds. A list of beds provided for tuberculosis cases is given in Table XII. on page 47 and these may be summarised as follows:—

County Council Institutions Isolation and other Hospitals under Agreement Other Institutions at short notice or as required	•••	No. of Beds. 150 70 119
		339

(ii) County Institutions. As regards the County Council's four Institutions, he following Table contains particulars (kindly supplied by the County Accountant) egarding number of beds and cost per patient per week. In each case the weekly sost is much less for 1921 than was the case in 1920.

TABLE ZIII.

Showing for each County Sanatorium number of beds, administrative expenses, and cost per week per patient, for the year ended 31st March, 1922.

	Institution.	Bleck Notley	Harold Court	Figh Beech	Sible Heding-

N.B.-Ihe Harold Court Farm Accounts are excluded from this Table, with the exception of 2675 charged under the heading of "Provisions" for produce supplied to the Sanatorium.

Each Institution has been carried on successfully throughout the year, due in a small measure to the continued zeal and energy of the Medical Superintendents, latrons, Nurses and Domestic Staff. At High Beech and Sible Hedingham where hildren are accommodated, the help of the Teachers has been of great value, both om the disciplingry as well as educational point of view.

Extensions and improvements have been carried out at the Harold Court and trium for men throughout the whole year. Patients certified by the Medical uperintendent as fit for employment have given a great deal of practical assistance. Each patient was engaged in his own trade as joiner, painter, cobbler, ardener, poultry-keeper, &c. Shelters have been made and repaired; an cinerator has been erected; improvements and alterations to buildings carried out; uts, shelters and most of the outside woodwork have been painted, etc.

This experiment has not only been of practical value (all work being valued by ne County Architect) but has proved beneficial to the patients, keeping them sefully employed and restoring their confidence in their physical capacity when ltimately discharged to the ordinary conditions of life. A grant is made to each rorking patient to a maximum of five shillings per week, subject to the following onditions:—

- (a) That the work undertaken is essential at the time.
- (b) That such work is only undertaken in, or for, County Council Institutions or purposes.
- (c) That the total cost of such work is less than would be charged by outside contractors, if it were put out to tender.
- (d) That patients are not retained in the Institution for employment purposes only.

As regards 22 patients sent from Essex for courses of combined treatment and raining to Papworth, Preston Hall and Nayland Training Colonies, it cannot be said from enquiries which have been made that the results achieved are on the whole satisfactory. Experience has shewn that there are many difficulties in the way of training consumptive ex-service men in an occupation different from that which they have followed hitherto. It is easy to advise these men to seek a job in the open air, but of what value to a farmer is an unskilled hand, an untrained eye and an inexperienced brain. Some patients would certainly benefit under ideal colony conditions, but very few could stand the strain of ordinary farm life.

In only a very few cases has change of employment been successful, as economic conditions of competitive labour have to be contended with. This experience, therefore, leaves us with the following two alternatives only: (1) that a man must return to his own trade, or (2) that he should remain permanently at a colony. As regards (1), a patient must have good nourishing food, and he is in a far better position with the education derived at a sanatorium or colony to provide it from the wages at his old trade, even if the conditions are not as hygienic as they should be, than would probably be the case in a new occupation in an ideal environment.

As regards (2), Dr. P. C. Varrier Jones, Medical Director, Papworth Tub culosis Colony, aptly sums up the position as follows: —"Let communities "started in which our consumptive soldier can live in his own home, shielded fro "the fierce competition of the outside world, a self-respecting worker, an econom "asset. Let employment be found, the model factory erected, the hours of t "properly regulated, a fair wage paid."

In view of the need for securing the most economical utilization of resident institutions, it was found necessary to request the Tuberculosis Officers to bear mind the following order of priority when making recommendations for Sanatoric treatment:—

- (i) Patients in whom arrest of the disease may be reasonably expected.
- (ii) Patients in whom the disease is not likely to be arrested permanent but who might reasonably be expected to resum: part-time employment as a result of institutional treatment.
- (iii) Patients in need of a short course for edu tional purposes.
- (iv) Patients who are a danger to others, particularly young children, owi to bad home environment, and for whom the provision of a shell would not be sufficient.

The greatest need at the present time is accommodation for female advacases. For the period commencing 1st October, 1919, and expiring 1st May, 10, the Ministry of Health approved of the use for this purpose of a Ward Block at t Halstead Isolation Hospital, with excellent results to all concerned. Since the approval was withdrawn, the difficulties attending the isolation of female advanceases have been great, except in those areas where the Boards of Guardians read admitted such cases to their Infirmaries, some of which are admirably adapted for t purpose.

As regards male advanced cases, the Harold Court Sanatorium has been inestimable service, and consequently little difficulty has attended this type of case

At the High Beech Hospital for Surgical Tuberculosis, excellent resulare being obtained under the able supervision of Sir Henry J. Gauvain, who invaluable services have led the County Council to appoint him as Consulti Surgeon for Surgical Tuberculosis for the whole of the Administrative County, will effect from 1st January, 1922. During last autumn, Sir Henry Gauvain presented carefully prepared scheme for improving the facilities for treatment at High 1325 but financial and other exigencies have unfortunately prevented the Committee from putting his suggestion into force.

Railway Vouchors. During the year an arrangement was made with t various Railway Companies in Essex whereby printed railway vouchers are issudirect from the Public Health Department to necessitous patients. This voucher presented by the patient at the Station named thereon, and is exchanged for a tick

the destination required. Under this system a considerable amount of time and pense is saved, and each railway submits an account monthly, to which are attached the cancelled railway vouchers.

Extra Nourishment. On the 3rd November, 1921, the Ministry of Health vised that the classes of patients likely to benefit to the greatest extent from grants extra nourishment are the following:—

- (i) Patients who have received an adequate course of sanatorium treatment and whose medical condition is such that, with the grant of extra nourishment, they may be expected to maintain or recover full working capacity, and
- (ii) Patients in whose cases ultimate arrest of the disease may reasonably be anticipated, and who are waiting for admission to a sanatorium.

Financial circumstances must be also taken into account, and grants are not the except to patients who cannot reasonably be expected to incur the necessary ditional expenditure from their own resources. In consequence, a considerable function was made in the estimates, as will be seen below:—

Year.				Amount.
1921-22	* * *	 	• •	£1,100
1922-23		 	***	£355

During the year 1921 extra nourishment was granted to 257 patients, 87 being ten over from the Essex Insurance Committee on 1st May, 1921. Naturally it is proved difficult to avoid creating disappointment by withholding the nourishment which has been granted so readily in the past. The problem had, however, to faced sooner or later, as undoubtedly in many cases the County Council's duties re overlapping those of the Boards of Guardians—to whom many cases have rforce to be referred under the revised regulations.

In order to ascertain that the milk supplied as extra nourishment for tuberculosis ients was of a good quality, the Foods and Drugs Inspectors were asked in 17 tances to obtain two samples of milk from each vendor, one for chemical mination and the other for bacteriological examination. As regards the former ry sample of milk was certified by the Public Analyst as genuine, but as regards latter, in one instance acid fast bacilii resembling microscopically tuberculous tilli were found. Arrangements were made with the local Medical Officer of Health this particular supply of milk to be stopped until certified free from these bacilli.

antal Treatment.

The County Council's scheme, outlined in the Annual Report for 1919, has in continued. Under this scheme 77 patients were treated, having 327 extractions 148 fillings. In addition 14 patients had scalings.

It has long been recognised that if a patient is to derive the fullest possible refit, particularly from sanatorium treatment, he must first have his teeth attended Consequently dental treatment has been made one of the conditions which must complied with before any patient is admitted to a County Sanatorium.

Contributions by Patients.

(1) Children. Contributions from parents were first asked for in August, 1914, but: system was not regularized until June, 1916. The system was further impressed on 1st January, 1920, when a scale was established under which all parents (except in necessitous cases) are required to contribute weekly sums based upon their weekly incomes.

Most parents gladly avail themselves of the opportunity to assist in this way and in no case has a child been deprived of treatment thereby. During the year ended 31st December, 1921, the sum of £898 0s. 5d. was collected from parents by the County Accountant.

(2) Adults. It is now considered by the Ministry of Health that local authorities should require a contribution towards the cost of the residential treatment of persons suffering from tuberculosis (other than ex-service men whose disease has been held to be attributable to or aggravated by war service) in cases where the financial circumstances of the patient are such as to justify a charge. In this connection care is to be taken not to deter persons who are in need of treatment from accepting treatment.

After careful consideration the County Council, who had previously secured contributions from several well-to-do patients, agreed to adopt as a guide the same scale for adults as for children, subject to the following:—

- (i) That accepted and una epted ex-service patients be regarded for all purposes as necessitous.
- (ii) That all other adult patients be dealt with on their merits.
- (iii) That in calculating the contributions to be paid by adult patients, the income received by the patient whilst incapacitated should only be considered.

This scheme did not come into operation until 1st April, 1922.

After-Care.

The After-Care Associations at Barking, Chelmsford, Colchester, Ilford Leyton, and Saffron Walden have continued to assist Tuberculosis patients in their respective districts.

The functions of these Associations, which were enumerated in the Annual Report for 1919, have been strictly adhered to, and apart from the difficulty in raising funds, these Associations have been a great boon to the localities, and experience proves that no scheme for the treatment of Tuberculosis is complete without a network of these Associations throughout the County.

PART IV.

MAYERNITY AND CHIED VYELFARE HUY, 1913. NOTIFICATION OF BIRTES AUTS, 1907 & 1915.

(1) County Area. As and from 1st April, 1921, the County Council became sponsible for administering the above Acts in the following 25 Sanitary Districts rich, according to the 1921 preliminary Census, have a total population of 4,320:—

Municipal Boroughs. Maldon Saffron Walden	Urban Districts. Braintree Brentwood	Rural Districts. Belchamp Billericay
	Brightlingsea Burnham-on-Crouch Epping	Braintree Bumpstead Dunmow
	Frinton-on-Sea Halstead Shoeburyness Walton-on-the-Naze	Epping Halstead Ongar Rochford
	Witham Wivenhoe	Saffron Walden Stansted Tendring.

(2) Scheme. Briefly, the Scheme submitted to and approved by the Ministry Health consisted of the undermentioned services for 1921-22:—

Service.			imated Cost, 1921-22.
Nursing Association for Midwifer	y Sarvica (proportio	n)	£ 3,960
	y Service (proportio.	u)	· ·
Health Visitors (8 whole-time)	,***	• • •	1,200

Fees to Doctors called in	•••	• • •	800
Inspection of Midwives	•••		300
Other Payments	***	• • •	320
	,		£8,160
		-	

- (3) Medical Service. A full list of the County Medical Staff is given on age 5 and of these 10 devote part of their time to Child Welfare work by making Centres, giving "Talks" to parents, etc. The principle of combined redical service has been followed.
- (4) Nursing Service. The Seheme allowed for the provision of 8 whole-time hild Welfare Nurses in the special area, but with the advantages derived from the

combined nursing service and with the assistance of the District Nurse-Midwives, it has been possible to carry out the work during the six months of 1921 with the appoinment of 5 additional whole-time and 2 part-time Health Visitors. At the end of the year, therefore, the Health Visiting Staff consisted of the following:—

(I) Whole-time appointments—

()					
(a)	School Nursing				11
(b)	Tuberculosis				12
(c)	Child Welfare	• • •	• • •		5
Part-t	ime appointments			• # •	8
	(b) (c)	(b) Tuberculosis (c) Child Welfare Part-time appointments	(b) Tuberculosis (c) Child Welfare	(b) Tuberculosis (c) Child Welfare	(b) Tuberculosis (c) Child Welfare

16 whole-time and 3 part-time Health Visitors undertake Child Welfare, Schoo Nursing and Tuberculosis work, 5 whole-time and 2 part-time undertake Tuberculosis work only, whilst 7 whole-time and 3 part-time undertake the duties of School and Tuberculosis Nursing.

These Health Visitors' duties are definitely laid down by General Instructions. In regard to the Child Welfare section of their work, notifications of births are received by the County Medical Officer and then transmitted to the appropriate Health Visitor. The forms have been devised so that they become also a record t visits, and thus the usual infant record card is not required, and clerical work is reduced to a minimum. The Health Visitor then deals with the notifications as follows:—

- (a) Sends to District Nurse-Midwife all notifications of births which have occurred in her practice;
- (b) Retains all other notifications.

Supervision of the cases is then undertaken by the respective nurses, and the Health Visitor is required to meet the District Nurse-Midwives in her area each quarter to ensure co-operation and the collating of statistics on a prescribed form. Antenatal work is allocated, as far as possible, in a similar manner, and the duties at the various Child Welfare Centres are also divided when necessary. A pamphlet on "How to take care of Baby" is distributed to each mother.

Summary of work done during the period 1st July, 1921, to 31st December, 1921.

				D	N-N	ls.			
	H	calth Visito	rs.	No.	of vi	sits.	Tot	al vis	sits.

received.		visits.		natal.		natal.	natal.		natal.
1787		3898		1678		2080	 1673		5978

From the Returns received from Registrars, it was ascertained that 89 births had not been notified, but the proportion is diminishing as the scheme becomes better known.

(5) (3.1 Welfare Centres. The aim by been to maintain these on a voluntary basis under the control of Local Voluntary Committees, to whom a grant is taide by the County Council, provided the Perins of Reference set out below are adopted. Twelve Centres have been continued or established on this basis, and in addition

are Centres at Witham, Stansted and Braintree, which do not accept a grant. In the instances, the Centre is held on the same premises as those used for all Clinic purposes:—

(a) Terms of Reference for Local Child Welfare Sub-Committees.

The powers under the above-mentioned Acts are now vested in the County Council, who desire to maintain the local interest in the Child Welfare work by ssisting existing Local Child Welfare Sub-Committees or by assisting in the stablishment of new Sub-Committees. To this end the County Council are prepared to make a grant of not exceeding £20 per annum, but in no case to exceed £5 per 1,000 population, to each Local Child Welfare Sub-Committee and to supply, if required, a Medical Officer and Health Visitor, provided the conditions enumerated below, which are chiefly in connection with the supervision of the Child Welfare Centres, are complied with:—

- (1) To elect a Chairman, Vice-Chairman and Secretary.
- (2) To meet monthly or oftener as required.
- (3) To co-opt such members as the County Council may require.
- (4) To provide and furnish, in the ordinary way, suitable rooms in which the Centre can be held, and also to provide for their cleaning, lighting and heating. Special equipment will be supplied by the County Council.
 - (Sunday Schools, Institute Buildings, School Clinics, etc., are generally suitable for this purpose).
- (5) To raise funds to meet current expenses, including assisting necessitous cases in providing medicaments, home helps, spectacles, etc., and paying travelling fares to and from treatment centres, convalescent homes, etc.
- (6) To submit to the County Medical Officer an Annual Report, which shall include a Statement of Accounts.
- (7) To receive reports (written or verbal) from the County Medical Officer, Child Welfare Officer and Health Visitor for consideration and necessary action.
- (8) arrange, through the Child Welfare Officer and Health Visitor or otherwise, for sympathetic enquiries to be made into the home circumstances of necessitous cases.
- (9) To arrange for educational propaganda at Chill Welfare Centres, schools, public meetings, etc.
 - (The services of the Child Welfare Officer and Health Visitor will be available for this purpose).
- (10) To assist, when required, the District Education Sub-Committee in the care of school children.
- (11) To submit, from time to time, to the County Medical Officer, suggestions regarding necessary improvements in the Child Welfare work.

(6) Provision of Milk. Supplies of milk at less than cost price to necessitous cases were stopped when the Ministry of Health indicated by Circular 234, dated 26th August, 1921, that the Grant to Local Authorities for this purpose was reduced from 50 per cent. to 5 per cent. A further Circular 267, dated 13th December, 1921, however, intimated that the Ministry had decided to revert to the original grant of 50 per cent., whereupon the County — incil set aside for the year 1922-23 the sum of 2500 for the provision of milk in nec — tous cases, in accordance with the Ministry's requirements.

During the year 1921 "Glaxo" was supplied from the Central Office at cost price to necessitous cases, either the ugh the Health Visitors or the Child Welfare Centres, and this arrangement has been much appreciated.

(7) District Combined Committees. The County Education Area is divided into 19 District Snb-Committee areas. Suggestions have been made for the establishment in each District Education Sub-Committee's area of a District Combined Committee consisting of members of existing Care of Children's Committee and representatives from the County Council, Local Authorities, Welfare Centres,

omen's Institute, etc. Such a Combined Committee would be responsible for e supervision locally of preventive and remedial measures in connection with the alth of mothers, school children and infants, and it was suggested that the Clerks the District Education Sub-Committees should act as Clerk to the District of the

In the Halstead and Belchamp Districts the existing Care Committees have med themselves into two Special Joint Committees, one for the Halstead District I the other for the Belchamp District. These Committees have representatives in Local Sanitary Authorities, Boards of Guardians, etc., and have adopted the unty Council's Terms of Reference mentioned above, and will supervise locally nool Medical Inspection, Child Welfare and other Public Health work.

When the present financial exigencies are removed, it is hoped that it will be sible to arrange for additional combined School and Child Welfare Clinics to be ablished in various parts of these areas. Meanwhile, these Committees are doing they possibly can to secure assistance for any necessitous cases which are brought heir notice.

The Clerks to the various District Education Sub-Committees have shown a linguess to a sist in promoting an efficient Child Welfare Service, and have tinued their valuable work in connection with School Medical Inspection.

dwives 1 s, 1902 & 1918.

(a) Practising Midwives. During the year under review 272 midwives notified r intention to practise in the Administrative County. Of these, 238 were actually ractice at the end of the year 1921. These midwives are classified as follows:—

Total No. of				Bona	fide, including
Midwives in practice		Trained		untrai	ned and LO.S.
at end of year.	Dependent	In	dependent.	C	crtificated.
238	123		73	• • •	42

The total number of births which occurred during the year 1921 was 18,298, of these, 7,166 (39.1 per cent.) were attended by midwives in the capacity of a wife, and 2,616 (11.3 per cent.) as maternity nurses under the supervision of ical practitioners.

At the end of the year each midwife was asked to state the number of confinement cas which she attended as a midwife during the year 1921, and it was found that a rained and 18 untrained midwives attended 10 or less cases each; 45 trained attended 11—20 cases each; 27 trained and 3 untrained attended 40 cases each; 6 trained and 1 untrained, 41—60 cases each; 15 trained and 4 unined, 61—100 cases each, and 7 trained and 12 untrained midwives attended over cases each. In addition, the midwives at the Leytonstone and Walthamstow 1 ies attended 653 cases as midwives.

(b) Notifications. The following list shows the number of notifications recive from certified midwives in accordance with the rules of the Central Midwives, By during the year as compared with the previous year:—

				1900		1921.
Records of Medical Aid				1000		1033
Records of Still-birth	* * *		• • •	132		122
Deaths of Mothers			• • •	1	• • •	4
Deaths of Infants		• • •	• • •	19		17

(c) Visits. Six hundred and twenty-three (623) routine visits were made to midwives during the year and with few exceptions, the mode of practice, equipment and records, etc., were found to be quite satisfactory.

In no case was it found necessary to report a midwife's conduct to the Centul Midwives Board.

(d) Doctors' Fees. In accordance with the Midwives Act, 1918, the County Council paid the sum of £81.17s. 6d. as fees to medical practitioners, and recovered from parents during the year the sum of £174.16s. 0d.

ctures to Midrivor.

An excellent syllabus of lectures was again arranged under the auspice of the Ex Midwives' Association, the midwives being invited to the following Century of of which six lectures were given during the winter months: Chilm-had Clester, Leytonstone, Saffron Walden and Southend-on-Sea

(a) General. For the feelful 1st france 19.1, to 3 jet December, 1991, the

collowing grants were paid by the County Council to the County Nursing Association in accordance with the Agreement:—

(a) Cost of training District Nurse-Midwives ...

(b) Maintenance of two emergency nurses ...

(c) Grants to affiliated District Nursing Associations ...

(d) Equipping District Nurse-Midwives for new areas ...

(e) Clerical and organizing expenses ...

(7) County Nursing Association Association ...

(b) Maintenance of two emergency nurses ...

(c) Grants to affiliated District Nursing Associations ...

(d) Equipping District Nurse-Midwives for new areas ...

£5,687 10 5.387 2

The County Council and the County Nursing Association continue to work in close co-operation, there being five members of the Public Health and Housing Committee appointed as representatives on the Association's Executive Committee, and on the other hand two members of the Association are co-opted members of the Count Council's Maturity and Child Welfare Sub-Committee.

Total

Steps were taken by the County Council early in 1921 to enter into a revised 'greement with the Association for a further three years from 1st April, 1921, but wing to the present need for economy, the Ministry of Health have not seen beir way to approve the Agreement for more than one year ending 31st March, 1922. In their negotiations are therefore taking place.

The is no doubt that the efforts of the County Nursing Association during the net four years have culminated in the provision of a Districe Nursing Service, of which the County is justly proud, and it is hoped that the Association's excellent work will not be hampered in the future by the economy campaign.

If stings of the Association's Executive Committee are held on the first Friday month, to which are submitted reports on the work done during the previous with. These reports reveal the following interesting figures:—

(i) Affiliated District Nursing Associations.

Number affiliated	on 1st January,	1921		103
27	during the year	• • •	• • •	,15
	Total	* & &		118

(i.) Parishes.

Area)				377
Number served by a	ffiliated District	Nurse	Asso-	
ciations		• • •		2.18
Number still to '; pr	ovided for			129

It will be seen, therefore, that about two-thirds of the parishes are rived District Nurses, and every effort is being made to provide for the remaining one-the District Nursing Associations are urgently needed in the Ongar, Maldon, Rochfond and Orsett Anral Districts. To alleviate the shortage of midwives in the last the named districts the County Council are making a grant of 220 per annum to sedertified midwives practising at Hadleigh, Tilbury, Stanford-le-Hope, Gr. Wakering, Bradwell-on-Sea, Pitsea and Eastwood.

(b) District Nursing Associations. The following table shows the number District Nursing Associations in the Administrative County which were affiliated the County Nursing Association at the end of the year:—

No. of affiliated D.N. Assoc.	No. undertaking Midwifery and District Nursing.	No. 7 aforming D' 1 Numing duties oul
118	 104	 14

A summary of the work undertaken by the 124 District Nurses belonging affiliated Associations during the year 1921 is given below:—

Midwife	ery Visits				21,961
Materni	ty "				25,486
District	General				123,027
1 2	Tuberculosi	S	* * *		3,031

Home	,,			* * *	1,991
	Total 1	number	r of visits	• • •	180,308
Average	number of	visits p	per District N	nrse .	1,454.

Of the 118 affiliated Associations, 112 participate in the County Councilla Combined Nursing Scheme. On 1st July, 1921, the Maternity and Child Wel Scheme was put into operation in the 25 districts for which the County Counties the authority for Maternity and Child Welfare. In this area 63 District Nur Midwives were employed by a liliated Associations, and they were asked to for assist the whole-time Health Visitors by carrying out post-outal visiting in parishes covered by the Association. This branch of the Combined Nursing Scheme now working smoothly and satisfactorily.
